                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  δ
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         This invention relates to a novel method of identifying ligands to an orphan receptor protein which comprises transforming cells with DNA encoding a fusion protein of the orphan receptor with a fluorescent protein, so that the fusion protein is expressed in the cells (or cell membranes isolated from them) and contacting the cells with the potential ligand to be tested. A suitable fluorescent protein for incorporation in the fusion protein is green fluorescent protein (GFP), for example GFP-1, wild-type GFP, GFPPU or Enhanced GFP (EGFP). The method is useful for the identification of ligands binding to an orphan receptor protein.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        61 NLAVADLCLLCTLPFVLHSLRDTSDTPLCQLSQSGIYLTNRYMSISLVTAIAVDRYVAVRH 120

The invention provides GPR35A polypeptides having at least 70% identity with the present sequence, GPR35A polypeptides combinant materials, and methods for their production. GPR35A polypeptides can be used for identifying agonists and antagonists/inhibitors, and for detecting diseases associated with inappropriate GPR35A activity or levels. GPR35A polypeptides and polymucleotides, anoists, antagonists and antibodies are used to treat infections such as bacterial, fungal, protozoan and viral infections, particularly HIV-1 and HIV-2; pain; cancer; diabetes;

The invention relates to a novel method for determining if a nucleic acid is a marker for a predetermined phenotype/cell type of interest from a blological species. The method comprises performing a global comparison of a group of expressed sequence tags (ESTs) known to be expressed in the comparison of a group of expressed sequence tags (ESTs) known to be expressed in the chancype/cell type of interest which all ESTs expressed in the phenotype/cell type of interest with all ESTs expressed in the chancype/cell type of interest is a marker for a predetermined phenotype or cell type of interest from a biological species, preferably arabidopsis or chuman. The cell type of interest is an abnormal cell such as a tumour cell, and the predetermined phenotype is a stress induced phenotype such as hyperosmotic stress or high salt conditions. A method of the invention is also useful for detecting at tumour cell, and for regulating or preventing the growth of a tumour cell, and for regulating or cancer in a human, for detecting a tumour cell, and for regulating or tumour-associated markers. A polypeptide of the invention is useful as an immunogen for vaccinating an animal. The present sequence represents a cumour-associated markers. A polypeptide of the invention is useful as an immunogen for vaccinating an animal. The present sequence represents a cumour-associated markers.
Determining if a nucleic acid is a marker for a phenotype/cell type of interest, by global comparison of expressed sequence tags known to be expressed in the phenotype/cell type with all ESTs expressed in normal tissue.
                                                                                                                                                                               Claim 29; Page 448-449; 516pp; English.

The invention relates to pharmaceutical compositions that comprise an agent that inhibits the expression or activity of a tumour-associated antigen (TMg) that is encoded by a nucleic acid. The pharmaceutical compositions and related compositions, are used for treatment of diseases associated with (abnormal) expression of TMg, specifically cancer e.g. of lung, breast, prostate, colon, stomach, pancreas, ear/nose/throat, kidney or cervix, also melanoma. Compositions containing TMg, or related nucleic acid, antibodies or host cells, are also useful for diagnosis and monitoring of tumours. The present sequence represents the amino acid sequence of a human GPR35.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           61 NLAVADLCLLCTLPFVLHSLRDTSDTPLCQLSQGIYLTNRYMSISLVTAIAVDRYVAVRH 120

Sequence 108, Application US/09170496D Patent No. 6555339

RESULT 5 US-09-170-496D-108

```
APPLICANT: Chalmers, Derek T.
APPLICANT: Liaw, Chen W.
TITLE OF INVENTION: No. 6555339-Endogenous, Constitutively Activated Human G Protein-
TITLE OF INVENTION: Receptors
FILE REPERBACE: AREN-0040
CURRENT APPLICATION NUMBER: US/09/170,496D
CURRENT PILING DATE: 1998-10-13
NUMBER OF SEQ ID NOS: 294
SOFTWARE: Patentin version 3.1
SEQ ID NO 108
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Sequence 222, Application US/09170496D

Sequence 222, Application US/09170496D

Patent No. 6555339

GENERAL INFORMATION:

APPLICANT: Behan, Dominic P.

APPLICANT: Chalmers, Derek T.

APPLICANT: Liaw, Chen W.

TITLE OF INVENTION: No. 6555339-Endogenous, Constitutively Activated Human G Protein-
TITLE OF INVENTION: Receptors

FILE REFERENCE: AREN-0040

CURRENT APPLICATION NUMBER: US/09/170,496D

It currently consists of 7 contigs. The true order of the pieces is not known and their order in this sequence record is arbitrary. Gaps between the contigs are represented as runs of N, but the exact sizes of the gaps are unknown. This record will be updated with the finished sequence.

This clone is available from RZPD;
Contact RZPD (customer.serviceErzgd.de) for further information.
Clone ame at Harvard Institute of Proteomics
(www.hip.harvard.edu): FLH131000.01X
This CDS clone is part of a collection of human full ORF clones
jointly established and verified by the Harvard Institute of
Proteomics (HIP) and RZPD.
This CDS has been cloned incl. stopcodon.
The CDS has been inserted into pDONR201 via a BP Clonase(TM)
reaction. Additional sequence has been added in front of the start
codon: att. .AAAAAA GCA GCC TCC ACC (ATG).
The stopcodon is followed by the 3' att site: GACCCAGCTTCTT. att
The clone is validated by full sequence check.
Compared to the reference sequence NM_005301 (GI:33695096) we found
                                                                                                                                                                                                                                                                                                                                                                                                                                                                               CR541765 930 bp mRNA linear PRI 29-JUN-2004 Homo sapiens full open reading frame cDNA clone RZPDo834D0330D for gene GPR35, G protein-coupled receptor 35; complete cds, incl.

This CDS clone is a part of a collection of human full-length rhis CDS clone is a part of a collection of human full-length rhis ORF clone has been cloned with normalized stop-codon. AttB recombination sites have been added to either end of the ORF and directionally cloned using the Gateway cloning system into pDONR 201. Additional sequences in the clone: 'ACC' before the 'ATG' (corresponding to ribosomal binding site and Kozak consensus sequences). Each clone is clonally isolated and full-length
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           other sequences; artificial sequences.

New human G-protein coupled receptor (GPCR), useful for screening agonist or inverse agonist compounds for treating diseases associated with GPCR.

Example 2; Page 188-189; 201pp; English.

The present invention relates to transmembrane receptors, particularly

endogenous human G-protein coupled receptors (GPCRs), mutant (non-endogenous) versions of the GPCRs, and the polynucleotide sequences encoding them. The GPCRs are useful for screening agonist or inverse agonist compounds for treating diseases associated with GPCR. Diseases that can be treated with such compounds include allergies, hypertension reflux disease, depression, migraine, schizophrenia, ulcers, psychotic disorders, asthma, bronchospasm, anaesthesia, myocardial infarction (MI), stroke, glaucoma, prostatic hyperplasia, epilepsy, prostate cancer, anxiety, prostatic hypertrophy, rhintis, and angina. The present invention relates to transmembrane receptors, particularly endogenous human G-protein coupled receptors (GPCRB), mutant (nonendogenous) versions of the GPCRs, and the polynucleotide sequences encoding them. The GPCRs are useful for screening agonist or inverse agonist compounds for treating diseases associated with GPCR. Diseases that can be treated with such compounds include allergies, hypertension, reflux disease, depression, magraine, schizophrenia, ulcers, psychotic disorders, asthma, bronchospasm, anaesthesia, myocardial infarction (MI), anxiety, prostatic hypertaplasia, epilepsy, prostate cencer, sequence encodes an endogenous human GPCR.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   ö

The present invention describes antigenic peptides (I) comprising: (a) any one of 1601 sequences (see ABP82019 to ABP83619) of 12-24 amino caids. Also described: (I) an assay for the detection of a particular G protein-coupled receptor (GPCR) or a candidate polypeptide in a sample; and (2) an isolated antibody having high specificity and high affinity or cardial, the peridens of periods as GPCR modulators and in Gene therapy. The antigenic peptides for GPCRs are useful in detecting an autibody against a particular GPCR. (I) can be used as GPCR modulators and in Gene therapy. The peptides for GPCRs are useful in detecting an antibody against a particular GPCR, and in the production of specific antibody against a particular GPCR. The antigenic peptides for GPCRs and antibodies are useful for diagnosing and designing the presence of corresponding GPCRs. The antigenic peptides for GPCRs and antibodies are useful for diagnosing and designing drugs for treating immune-related diseases, growth-related disease, or autoimmune diseases, growth-related disease, or autoimmune diseases, e.g. AIDS, Alzheimer's disease, atherosclerosis, bacterial, fungal, protozoan or viral infections, osteoporosis, cancer, cardiamy chronic and acute inflammation, allergies, crohm's disease, diabetes, graft versus host disease, parkinson's disease, multiple sclerosis, path, psoriasis, cancer, cardiamy, pentiasis, cancer, cardiamy, pentiasis, cancer, cardiamy, pentiasis, con anxiety, depression, schizophrenia, dementia, mental retardation, memory loss, epilepsy, asthma, tuberculosis, obesity, nausea, hypertension, cany other disorders, rheumatoid arthritis, trauma, ulcers, or any other disorder in which GPCRs are involved. The antibodies may be consisted in immunoassays and immunodiagnosis. ABCA2523 to ABZ42869 encode consistence of the proteins given in him and path of the proteins given in him to be a protein in which general in the penting of the proteins given in the penti

The present invention relates to a method for predicting pathological conditions in heart failure using expression of one of 17 gene sequences (ADB67563-ADB67681); or protein sequences encoded by the genes (ADB67648-ADB67662). The proteins and genes are useful for diagnosis, treatment and prevention of heart failure.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           121 GCGCTCTGGGTGTTCTGCTGCCGCATGGACGGAGACCCGCATCTACATGACC 180

The invention relates to human and mouse G protein-coupled receptors (GPCRs) and nucleic acids encoding them. The invention also relates to sequences at least 90% identical to the GPCR proteins and nucleic acids of the invention; methods of treating, preventing or diagnosing diseases a sesociated with GPCRs of the invention; methods of screening for compounds useful in the treatment of GPCR-related diseases; a transgenic mouse comprising a GPCR pene of the invention; a mouse comprising a GPCR pene of the invention; a mouse comprising a GPCR pene of the invention; and kits comprising a GPCR pene of the invention; and kits comprising a GPCR pene of the invention; and kits comprising a GPCR pene of the invention; and kits comprising a GPCR pene of the invention; and kits comprising a GPCR nucleic acid. The GPCR nucleic acid. The GPCR nucleic acid and proteins may comprising a GPCR nucleic acid. The GPCR nucleic acids and proteins may comprising a GPCR nucleic acid. The GPCR nucleic acids and proteins may comprise of the diagnosis, treatment or prevention of a wide variety of disorders of the advances. CC depression, diabetic neuropathy, Parkinson's disease or schizophrenia); disorders (e.g., Alzheimer's disease, disorders of the adrenal gland; disorders (e.g., Alzheimer's disease, compression; and disorders (e.g., angina, cardiac arrhythmia or syndrome); cardiovascular disorders (e.g., angina, cardiac arrhythmia or mycoardial infarction); muscular disorders (e.g., angina, cardiac arrhythmia or Albs); bone and joint disorders (e.g., angina, cardiac arrhythmia or Alberdamia or leukaemia); immune disorders (e.g., augina, cardiac arrhythmia or arthritis, gout or osteoporosis); metabolic or nutritive disorders (e.g., cancers). The pressent sequence argument disorders (e.g., cancers), the pressent sequence argument did not form part of the printed specification; rowardiac cardiac cardio of the invention. Note: The full sequence experient did not for
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               300
